

Initial Python Libraries and APIs Functionality Overview

I. Youtube-transcript-api:

- Uses Youtube Video ID to identify the desired video transcript
- Fetches transcript in all available languages
- Returns snippets of transcripts with start endpoint, duration and text content
- Gives option to keep original HTML-formatted output
- Lists out all available transcripts for a video
- Provides info if subs are auto-generated or manually created
- Uses proxies as a workaround for IP/Request bans
- Recommended to use Webshare for proxy setup or other HTTP/HTTPS/SOCKS
- Has built-in formatters for output standardization
- Customizes output for specific cases if needed
- Possible CLI proxy workaround

II. ankiapi:

- Decks can be created
- Flashcards can be added and annotated to a specific deck with a front and back template
- Audio can be added with a disk location and a file name
- Must have Anki installed and AnkiConnect as a dependency

III. genanki:

- Uses model with a front/back template that can be customized with CSS
- Each model must be unique for GenAnki to keep track of each one
- Notes can be added to multiple models at once
- Decks are generated from modules that can be used to create Packages

- Packages are loaded into Anki via the import function
- Packages can handle media content with its methods
- Notes distinct via GUID with customizable GUID hashing function
- Method for sorting note exists
- Template/Field Definition via YAML file is possible
- Can be used as Anki add on

IV. sPacy:

- Uses model to perform NLP tasks
- Models can be loaded from a common user space
- Can be optimized for efficiency or accuracy
- Use language-specific pipelines for tokenization
- Visualizations are included for syntax and NER
- ML frameworks supported

V. freedictionnaryapi.dev:

- Adequate for httpx/aiohttp
- Integrated word parser
- Integrates Audio recognition if needed
- Transcription of words is available
- Word Definitions are available
- Synonym/antonym extraction is possible
- Examples/Alternative Definitions are available
